 - B: API Documentation & Integration Guide
 - C: Security & Compliance Matrix
 - D: Technical Due Diligence Questionnaire Responses
 - E: Case Studies & References
-

1. Executive Summary

Uruti Hub Limited proposes a comprehensive Enterprise SMS Gateway solution to power Banque Populaire's customer communications, security notifications, and marketing initiatives. Our platform delivers the reliability, security, and scalability required by Rwanda's leading financial institutions.

Value Proposition

Deliver mission-critical banking communications with:

- **99.9% platform uptime** with redundant infrastructure
- **<2 second delivery** for time-sensitive OTPs and alerts
- **99.5%+ delivery success rate** across all major operators
- **Bank-grade security** with end-to-end encryption and audit trails
- **Seamless integration** with your existing core banking systems

Investment Overview

Flexible commercial models starting from **RWF XX,XXX,XXX annually** based on projected volumes of 5 million messages per year, with scalable pricing as your needs grow.

Implementation Timeline

12 weeks from contract signature to production go-live:

- Weeks 1-3: Requirements & Integration Design
- Weeks 4-7: Development & Configuration
- Weeks 8-10: Testing & UAT
- Weeks 11-12: Pilot & Production Launch

Key Differentiators

- **Proven banking experience** with 3 financial institutions across East Africa
 - **Local expertise** with deep understanding of Rwanda's regulatory environment
 - **Multi-operator redundancy** ensuring delivery even during network issues
 - **Dedicated support** with 24/7 monitoring and <1 hour response for critical issues
-

2. Understanding Banque Populaire's Requirements

As Rwanda's leading retail bank serving over 1.2 million customers, Banque Populaire requires a messaging platform that supports:

Critical Communication Needs

Transactional Messaging

- Real-time account debit/credit notifications
- Balance inquiry responses
- Loan disbursement and repayment alerts
- Fund transfer confirmations
- Mini-statement delivery

Security & Authentication

- One-Time Passwords (OTP) for login and transactions
- Fraud alerts and suspicious activity notifications
- Card activation and blocking confirmations
- Password reset verification
- Transaction authorization requests

Customer Engagement

- Product announcements and launches
- Service updates and system maintenance notices
- Promotional campaigns and special offers
- Educational content on financial literacy
- Branch and ATM location information

Operational Communications

- Payment due date reminders
- Dormant account reactivation
- KYC update requests
- Customer satisfaction surveys
- Emergency broadcast messages

Technical Requirements

- **High throughput:** Capacity to handle 500,000+ messages daily during peak periods
- **Low latency:** Sub-2-second delivery for OTP and critical alerts
- **API flexibility:** RESTful APIs and SMPP protocol support
- **Delivery assurance:** Real-time delivery receipts and status tracking

- **Scalability:** Ability to scale to 10M+ messages monthly as your customer base grows
- **Reporting:** Comprehensive dashboards and exportable analytics

Compliance & Security Requirements

- Alignment with National Bank of Rwanda (BNR) guidelines
- Data protection per Rwanda's Data Protection Law
- Secure storage and transmission of sensitive customer data
- Complete audit trails for regulatory review
- Role-based access controls
- Disaster recovery and business continuity measures

3. Our Solution

3.1 Platform Overview

The Uruti Hub Enterprise SMS Gateway is a cloud-native platform purpose-built for financial services. Our solution provides a centralized hub for all SMS communications with intelligent routing, comprehensive monitoring, and bank-grade security.

3.2 Core Capabilities

Feature	Capability	Business Benefit
Multi-Channel Routing	Intelligent routing across MTN, Airtel, and backup operators	Ensures delivery even during network congestion
Priority Queuing	Separate queues for OTP, transactional, and bulk messages	Critical messages delivered first
Real-Time DLR	Instant delivery receipt callbacks	Immediate confirmation of message delivery
Template Management	Pre-approved message templates with dynamic variables	Ensures compliance and brand consistency
API & SMPP	Dual protocol support with auto-failover	Flexibility in integration approach
Analytics Dashboard	Real-time monitoring and historical reporting	Data-driven decision making
Sender ID Management	Dedicated short codes and alpha-numeric IDs	Brand recognition and trust
Two-Way Messaging	Inbound SMS processing (optional)	Enable customer responses and surveys

3.3 Solution Architecture

3.4 Integration Approach

Option 1: RESTful API Integration (Recommended)

- Modern JSON-based API over HTTPS
- Easy to implement and maintain
- Built-in authentication with OAuth 2.0 or API keys
- Webhook support for delivery receipts
- Comprehensive API documentation provided

Option 2: SMPP Protocol

- Industry-standard SMPP v3.4
- High-throughput dedicated connection
- Ideal for real-time transactional traffic
- Persistent bind with automatic reconnection
- TPS up to 100 messages per second

Hybrid Approach: Both protocols can be used simultaneously, allowing different systems to connect via their preferred method.

3.5 Message Flow Examples

OTP Delivery Flow (Target: <2 seconds end-to-end)

1. Customer initiates sensitive action (login, transaction, password reset)
2. Core banking system generates time-bound OTP (3-minute validity)
3. API call sent to SMS Gateway with priority flag
4. Gateway routes via fastest available operator path
5. OTP delivered to customer mobile device
6. Delivery receipt returned to core system
7. Customer enters OTP for validation

Transaction Alert Flow

1. Transaction completed in core banking system
2. Trigger sent to SMS Gateway with transaction details
3. Pre-approved template populated with dynamic data

- 4. Message queued in transactional priority queue
 - 5. SMS delivered via optimal operator route
 - 6. Delivery status logged for audit trail
 - 7. Customer receives confirmation within seconds
-

4. Technical Architecture Overview

4.1 Infrastructure & Hosting

Cloud-Native Architecture

- Hosted on tier-3 certified data centers in Rwanda
- Multi-zone redundancy for high availability
- Auto-scaling to handle traffic spikes
- Regular backups with 99.99% data durability

Performance Specifications

- **Throughput:** Up to 500 TPS (transactions per second)
- **Latency:** <100ms API response time
- **Delivery Speed:** <2 seconds for OTP, <5 seconds for transactional
- **Concurrent Connections:** Support for 1,000+ simultaneous API calls

4.2 Operator Connectivity

Multi-Operator Redundancy

Operator	Role	Capacity	Failover Time
MTN Rwanda	Primary	100 TPS	N/A
Airtel Rwanda	Secondary	100 TPS	<5 seconds
International Gateway	Tertiary	50 TPS	<10 seconds

Intelligent Routing Logic

- Real-time operator performance monitoring
- Automatic failover on delivery failure or timeout
- Load balancing across multiple SMSC connections
- Cost optimization routing for bulk campaigns

4.3 API Integration Specifications

Base URL: `https://sms-api.urutihub.com/v1`

Authentication Methods:

- OAuth 2.0 Bearer Tokens (recommended)
- API Key authentication
- IP whitelisting for additional security
- Mutual TLS for enhanced security (optional)

Key Endpoints:

POST /messages/send - Send single SMS

POST /messages/bulk - Send bulk SMS (up to 10,000 recipients)

GET /messages/{id}/status - Check message status

POST /messages/schedule - Schedule future delivery

GET /reports/delivery - Delivery reports

GET /reports/analytics - Usage analytics

Sample Request (Send OTP):

json

POST /messages/send

Authorization: Bearer {your_api_token}

{

"from": "BP-BANK",

"to": "+250788123456",

"message": "Your Banque Populaire OTP is 847291. Valid for 3 minutes. Do not share.",

"type": "OTP",

"priority": "HIGH",

"reference": "TXN-2026-0115-001234"

}

Sample Response:

json

```
{  
  "status": "ACCEPTED",  
  "messageId": "msg_7x9K2mP4nQ8",  
  "reference": "TXN-2026-0115-001234",  
  "estimatedDelivery": "2026-01-15T10:30:02Z",  
  "cost": 25.00  
}
```

Delivery Receipt Webhook (to your endpoint):

```
json  
  
POST https://yourbank.com/api/sms/dlr  
  
{  
  "messageId": "msg_7x9K2mP4nQ8",  
  "reference": "TXN-2026-0115-001234",  
  "status": "DELIVERED",  
  "deliveredAt": "2026-01-15T10:30:01Z",  
  "operator": "MTN-RW"  
}
```

4.4 Dashboard & Reporting

Real-Time Monitoring Dashboard

- Live message flow visualization
- Current queue depths and processing rates
- Operator performance metrics
- Alert notifications for anomalies
- System health indicators

Analytics & Reports

- Daily, weekly, and monthly delivery statistics
- Success rate by operator and message type
- Cost analysis and trend reports
- Peak usage pattern identification
- Exportable in CSV, Excel, and PDF formats

5. Security & Compliance

5.1 Security Architecture

Data Protection

- **Encryption in Transit:** TLS 1.3 for all API communications
- **Encryption at Rest:** AES-256 encryption for stored data
- **Message Content:** OTP and sensitive data never logged in plain text
- **Secure Key Management:** HSM-based key storage and rotation

Access Controls

- Role-Based Access Control (RBAC) with granular permissions
- Multi-factor authentication for administrative access
- IP whitelisting and geo-fencing capabilities
- Session management with automatic timeout
- Comprehensive audit logging of all access and changes

Infrastructure Security

- DDoS protection and rate limiting
- Regular vulnerability scanning and penetration testing
- Security patches applied within 48 hours of release
- Intrusion detection and prevention systems (IDS/IPS)
- 24/7 security monitoring and incident response

5.2 Compliance Framework

Regulatory Alignment

Regulation/Standard	Our Compliance
National Bank of Rwanda (BNR) Guidelines	Full compliance with financial sector communication requirements
Rwanda Data Protection Law (2021)	Data minimization, consent management, retention controls
ISO 27001 (Information Security)	Certification in progress (Q2 2026)
PCI DSS (if handling card data)	Compliant infrastructure for payment-related messaging
GDPR (for international customers)	Right to erasure, data portability, privacy by design

Data Governance

- **Data Residency:** All customer data stored within Rwanda
- **Retention Policy:** Messages retained for 90 days, logs for 12 months (configurable)
- **Data Minimization:** Only necessary data collected and processed
- **Right to Deletion:** Automated data purging on request
- **Privacy by Design:** Default security settings, minimal data exposure

Audit & Compliance Support

- Immutable audit trails for all transactions
- Pre-built compliance reports for BNR submissions
- Support for internal and external audits
- Annual third-party security assessments
- Compliance documentation package provided

5.3 Business Continuity & Disaster Recovery

High Availability Design

- Active-active configuration across multiple data centers
- No single point of failure in critical path
- Automatic failover with <30 second detection
- 99.9% platform availability guarantee

Disaster Recovery

- **Recovery Time Objective (RTO):** <1 hour for critical services
 - **Recovery Point Objective (RPO):** <15 minutes (minimal data loss)
 - **Backup Frequency:** Continuous replication + hourly snapshots
 - **Geographic Redundancy:** Secondary site in different availability zone
 - **Annual DR Testing:** Full failover test with documented results
-

6. Implementation Approach

6.1 Project Timeline (12 Weeks)

Phase 1: Initiation & Design (Weeks 1-3)

- Project kickoff and stakeholder alignment
- Requirements gathering and validation workshops

- Technical architecture design and review
- Integration specification finalization
- Security assessment and approval
- Test environment provisioning

Deliverables: Project charter, technical design document, integration guide

Phase 2: Development & Configuration (Weeks 4-7)

- API/SMPP connectivity establishment
- Message template configuration
- Sender ID registration with operators
- Security controls implementation (IP whitelisting, tokens)
- Webhook endpoint development and testing
- Dashboard customization
- User account setup and training materials preparation

Deliverables: Configured test environment, integration code samples, user guides

Phase 3: Testing & UAT (Weeks 8-10)

- Integration testing with core banking systems
- End-to-end OTP flow validation
- Load and performance testing (stress test with 2x expected volume)
- Failover and disaster recovery testing
- Security penetration testing
- User acceptance testing with bank teams
- Training sessions for administrators and operators

Deliverables: Test reports, UAT sign-off, trained users

Phase 4: Pilot & Go-Live (Weeks 11-12)

- Limited production pilot (10% of traffic)
- Monitoring and optimization
- Issue resolution and fine-tuning
- Full production cutover
- Post-launch support and monitoring
- Knowledge transfer completion

Deliverables: Production system, operations runbook, support documentation

6.2 Implementation Methodology

Agile Approach with Weekly Sprints

- Weekly progress reviews with project steering committee
- Bi-weekly technical sync with integration teams
- Daily standups during critical phases
- Risk register maintained and reviewed
- Change management process for scope adjustments

Quality Assurance

- Code review and testing at every stage
- Automated testing for API endpoints
- Performance benchmarking against SLA targets
- Security scanning and validation
- User acceptance criteria clearly defined

6.3 Roles & Responsibilities

Uruti Hub Team

- Project Manager (overall delivery)
- Solution Architect (technical design)
- Integration Engineers (2) (API/SMPP development)
- QA Engineer (testing and validation)
- Security Specialist (security implementation)
- Support Engineer (training and documentation)

Banque Populaire Team (Required)

- Project Sponsor (executive oversight)
- Project Manager (day-to-day coordination)
- Core Banking System Administrator
- IT Security Officer
- Network Administrator
- Business Analysts (2) (requirements and UAT)
- End User Representatives (operations, marketing)

6.4 Training & Knowledge Transfer

Administrator Training (2 days)

- Platform configuration and management
- User and role management
- Sender ID and template administration
- Report generation and analysis
- Troubleshooting common issues

Developer Training (1 day)

- API integration best practices
- Error handling and retry logic
- Webhook implementation
- Testing and debugging techniques

Operations Training (1 day)

- Dashboard monitoring
- Alert management
- Incident escalation procedures
- Basic troubleshooting

Documentation Provided

- Administrator guide
- API reference documentation
- Integration cookbook with code samples
- Operations runbook
- FAQ and troubleshooting guide

7. Service Level Agreement & Support

7.1 Service Level Commitments

Metric	Target	Measurement
Platform Availability	≥99.9%	Monthly uptime calculation (excludes planned maintenance)

Metric	Target	Measurement
API Response Time	<100ms	95th percentile measured hourly
OTP Delivery Time	<2 seconds	95th percentile end-to-end
Transactional SMS Delivery	<5 seconds	90th percentile end-to-end
Delivery Success Rate	≥99.5%	Successful delivery / total sent (excluding invalid numbers)
Critical Incident Response	<1 hour	Time from alert to engineer engagement
Critical Incident Resolution	<4 hours	Time to restore service or implement workaround

SLA Credits

- 95-99.9% availability: 10% monthly fee credit
- 90-95% availability: 25% monthly fee credit
- <90% availability: 50% monthly fee credit

Exclusions from SLA:

- Issues caused by customer systems or incorrect integration
- Mobile operator network failures beyond our control
- Scheduled maintenance (with 5-day advance notice)
- Force majeure events

7.2 Support Model

24/7 Monitoring & Support

- Round-the-clock system monitoring
- Proactive issue detection and resolution
- Multiple support channels: email, phone, ticketing portal
- Dedicated account manager assigned

Support Tiers

Priority	Definition	Response Time	Resolution Target
P1 - Critical	Complete service outage, OTP delivery failure	15 minutes	1 hour
P2 - High	Degraded performance, partial service impact	1 hour	4 hours
P3 - Medium	Limited impact, workaround available	4 hours	1 business day
P4 - Low	Questions, feature requests, documentation	1 business day	5 business days

Escalation Path

1. Level 1: Support Engineer (initial response)
2. Level 2: Senior Engineer (technical troubleshooting)
3. Level 3: Solution Architect (complex issues)
4. Level 4: CTO (critical escalations)

Support Channels

- **Email:** support@urutihub.com (monitored 24/7)
- **Phone:** +250 XXX XXX XXX (24/7 hotline)
- **Portal:** <https://support.urutihub.com>
- **Dedicated Slack Channel** (optional, for real-time collaboration)

7.3 Continuous Improvement

Monthly Service Reviews

- Performance metrics review against SLAs
- Incident analysis and lessons learned
- Capacity planning and forecasting
- Feature requests and roadmap discussion
- Cost optimization opportunities

Quarterly Business Reviews

- Strategic alignment check
- Usage trend analysis
- ROI assessment
- Platform enhancement recommendations
- Industry best practice sharing

Annual Platform Audit

- Comprehensive security assessment
- Disaster recovery test
- Compliance review
- Performance benchmarking
- Technology roadmap update

8. Commercial Proposal

8.1 Pricing Model

We offer flexible pricing options to align with your operational model and budget:

Option A: Volume-Based Pricing (Recommended)

Monthly Volume	Price per SMS	Estimated Monthly Cost
Up to 100,000	RWF 25	RWF 2,500,000
100,001 - 500,000	RWF 22	RWF 11,000,000 (at 500k)
500,001 - 1,000,000	RWF 20	RWF 20,000,000 (at 1M)
1,000,001 - 5,000,000	RWF 18	RWF 90,000,000 (at 5M)
Above 5,000,000	RWF 15	Custom quote

All prices in Rwandan Francs (RWF) and exclude applicable taxes

Option B: Committed Monthly Plan

Plan	Included Messages	Monthly Fee	Overage Rate
Starter	50,000	RWF 1,500,000	RWF 30
Business	250,000	RWF 6,000,000	RWF 25
Enterprise	1,000,000	RWF 20,000,000	RWF 22
Premium	5,000,000	RWF 85,000,000	RWF 18

Option C: Hybrid Model (Pay-as-you-go + Base Fee)

- Platform fee: RWF 500,000/month (includes up to 10,000 messages)
- Additional messages: RWF 23 per SMS
- Best for variable monthly volumes

8.2 Sample Cost Projection

Scenario: Banque Populaire - Year 1

Assumptions:

- 1.2M active customers
- 40% receive at least one transactional SMS per month
- Average 3.5 SMS per active customer monthly
- Additional 500k marketing messages quarterly

Monthly Breakdown:

Category	Volume	Rate	Cost
Transactional SMS	1,680,000	RWF 18	RWF 30,240,000
Marketing SMS (monthly avg)	166,667	RWF 18	RWF 3,000,000
Total	1,846,667		RWF 33,240,000

Annual Cost: Approximately **RWF 398,880,000**

Cost per Customer per Year: RWF 332 (less than \$0.25 USD)

8.3 Implementation & Setup Fees

One-Time Fees:

Item	Description	Cost
Platform Setup	Initial configuration, account creation	RWF 2,000,000
Integration Services	API/SMPP integration support (40 hours)	RWF 3,000,000
Dedicated Sender ID	Registration with operators (BP-BANK)	RWF 500,000
Training	Administrator and developer training	Included
Documentation	Complete documentation package	Included
Total Setup		RWF 5,500,000

Setup fees waived with 2-year contract commitment

8.4 Optional Add-Ons

Service	Description	Pricing
Dedicated Short Code	5-digit number (e.g., 12345)	RWF 1,500,000/year
Two-Way SMS	Receive and process inbound messages	+RWF 5 per inbound SMS
Advanced Analytics	Custom dashboards and BI integration	RWF 500,000/month
Managed Services	Dedicated resource for optimization	RWF 2,000,000/month
Premium Support	30-minute P1 response, dedicated engineer	RWF 1,000,000/month

8.5 Payment Terms

Standard Terms:

- Monthly billing in arrears based on actual usage
- Payment due within 30 days of invoice
- Accepted methods: Bank transfer, direct debit
- Currency: Rwandan Francs (RWF)
- Annual prepayment discount: 10%
- Multi-year contract discount: Up to 15%

Contract Options:

- 1-year contract: Standard rates
- 2-year contract: 5% discount + waived setup fees
- 3-year contract: 10% discount + waived setup fees + premium support included

8.6 Return on Investment (ROI)

Quantifiable Benefits:

Cost Savings:

- Eliminate manual SMS processes and multiple vendor relationships
- Reduce failed transaction inquiries by 40% through proactive alerts
- Lower customer service call volume by 25% with self-service notifications
- Estimated annual savings: RWF 50,000,000

Revenue Enhancement:

- Increase digital banking adoption by 30% through OTP-enabled security
- Improve loan repayment rates by 15% with timely reminders
- Boost cross-sell conversion by 20% through targeted campaigns
- Estimated additional revenue: RWF 200,000,000+

Operational Efficiency:

- Automated messaging reduces manual effort by 80%
- Real-time delivery tracking improves operational visibility
- Consolidated reporting saves 10 hours/week in manual reporting
- Enhanced customer trust and satisfaction

ROI Calculation (Conservative):

- Annual cost: RWF 398,880,000
- Annual benefit: RWF 250,000,000 (savings + incremental revenue)
- **Payback period: <2 years**
- **3-year ROI: >85%**

8.7 Commercial Terms & Conditions Summary

- Contract term: 1, 2, or 3 years with auto-renewal option
- Price escalation: CPI-based annual adjustment (max 5%)
- Termination: 90 days written notice after initial term
- Data ownership: All message data belongs to Banque Populaire
- Service credits: As per SLA section (7.1)
- Liability cap: 12 months of fees paid
- Warranty: Platform fit for purpose, performance as specified

Full terms and conditions provided in separate agreement document

9. Why Uruti Hub Limited

9.1 Company Overview

Uruti Hub Limited is a Rwanda-based technology company specializing in enterprise communication platforms for financial services. Since our founding in 2018, we have powered over 15 million messages monthly for clients across East Africa.

Company Credentials:

- Rwanda Development Board registered company
- Rwanda Information Society Authority (RISA) certified
- ISO 27001 certification in progress (Q2 2026)
- Member of Rwanda ICT Chamber
- 45+ employees across development, operations, and support

9.2 Banking Sector Experience

Financial Institution Clients:

Case Study 1: Regional Microfinance Bank (Kenya)

- Challenge: Manual SMS processes, poor delivery rates (75%), high costs
- Solution: Implemented enterprise SMS gateway with multi-operator routing
- Results:
 - Delivery rate improved to 98.5%
 - 35% cost reduction through optimized routing
 - OTP delivery time reduced from 8s to <2s
 - 3 million messages/month processed reliably

Case Study 2: Mobile Money Provider (Uganda)

- Challenge: Needed high-volume capacity for transaction alerts
- Solution: SMPP integration with load balancing and priority queuing
- Results:
 - Scaled from 2M to 8M messages/month
 - 99.9% platform availability achieved
 - Zero downtime during peak periods
 - Reduced customer complaints by 60%

Case Study 3: Digital Lending Platform (Tanzania)

- Challenge: OTP delivery failures causing user drop-off
- Solution: Dedicated OTP channel with failover routing
- Results:
 - OTP delivery success increased from 82% to 99.2%
 - User conversion improved by 28%
 - Average delivery time: 1.8 seconds

- Platform supported 500k loan disbursements

References available upon request

9.3 Technology Excellence

Our Technical Approach:

- Cloud-native architecture built for scale and reliability
- Modern API-first design for easy integration
- Continuous monitoring and proactive optimization
- Regular security audits and penetration testing
- Agile development with bi-weekly releases

Technology Stack:

- Kubernetes for container orchestration
- Redis for high-performance message queuing
- PostgreSQL for transactional data
- Elasticsearch for analytics and logging
- Prometheus + Grafana for monitoring

Innovation & Roadmap:

- AI-powered delivery time optimization (Q2 2026)
- RCS (Rich Communication Services) support (Q3 2026)
- Chatbot integration for two-way interactions (Q4 2026)
- WhatsApp Business API integration (2027)

9.4 Local Presence & Understanding

Rwanda Focus:

- Headquarters in Kigali with local technical team
- Deep understanding of BNR requirements and local regulations
- Established relationships with MTN, Airtel Rwanda
- Knowledge of local market dynamics and customer preferences
- Same timezone for real-time collaboration

Regional Expansion:

- Active in 4 East African countries

- Compliance with regional regulatory frameworks
- Multi-currency and multi-language support
- Cross-border messaging capabilities

9.5 Customer Success Philosophy

Partnership Approach:

- We view ourselves as an extension of your team
- Dedicated account manager for strategic guidance
- Proactive optimization recommendations
- Regular business reviews and performance reporting
- Transparent communication and collaborative problem-solving

Long-Term Commitment:

- Invested in continuous platform improvement
- Industry best practice sharing
- Technology roadmap aligned with banking sector trends
- Commitment to your success and growth

9.6 Team Expertise

Leadership Team:

- **CTO:** 15+ years in telecom and messaging platforms
- **Head of Security:** CISSP certified, 10+ years in banking security
- **Head of Operations:** ITIL certified, managed 100M+ messages monthly
- **Solutions Architects:** Average 8 years experience in financial services integration

Certifications & Training:

- Team members hold certifications in AWS, Azure, security (CEH, CISSP)
- Regular training on banking regulations and compliance
- Participation in industry conferences and working groups
- Continuous professional development program

10. Next Steps

We are excited about the opportunity to partner with Banque Populaire in transforming your customer

communication capabilities.

10.1 Proposed Timeline for Engagement

Activity	Timeframe	Participants
Proposal Review & Questions	Week 1-2	Banque Populaire stakeholders
Technical Deep-Dive Session	Week 2	IT, Security, Operations teams
Live Platform Demonstration	Week 3	All interested stakeholders
Commercial Negotiation	Week 3-4	Procurement, Finance teams
Contract Finalization	Week 5	Legal teams
Project Kickoff	Week 6	Full project teams

10.2 Immediate Next Actions

We Recommend:

- Schedule Technical Workshop** (2 hours)
 - Deep dive into integration requirements
 - Review your current architecture
 - Discuss specific use cases and workflows
 - Q&A with our technical team
- Platform Demonstration** (1 hour)
 - Live demo of SMS Gateway dashboard
 - API integration walkthrough
 - Reporting and analytics showcase
 - Customer portal features
- Proof of Concept** (Optional - 2 weeks)
 - Test integration with one core system
 - Send sample transactional messages
 - Validate OTP flow and delivery times
 - Assess platform performance
 - No cost, no commitment
- Reference Calls**
 - Connect with our banking clients
 - Hear firsthand experiences

- Validate our capabilities and support

10.3 Decision Criteria Checklist

To support your evaluation, we recommend assessing proposals against these criteria:

Technical Fit:

- ☐ Integration complexity and timeline
- ☐ API flexibility and documentation quality
- ☐ Platform scalability and performance
- ☐ Disaster recovery and business continuity
- ☐ Multi-operator redundancy

Security & Compliance:

- ☐ Data protection and encryption standards
- ☐ Regulatory compliance alignment
- ☐ Audit trail and reporting capabilities
- ☐ Security certifications and assessments

Operational Excellence:

- ☐ SLA commitments and track record
- ☐ Support model and response times
- ☐ Monitoring and alerting capabilities
- ☐ Training and documentation quality

Commercial Value:

- ☐ Total cost of ownership
- ☐ Pricing transparency and flexibility
- ☐ ROI and business case strength
- ☐ Contract terms and conditions

Vendor Reliability:

- ☐ Banking sector experience
- ☐ Financial stability
- ☐ Customer references
- ☐ Long-term viability and innovation roadmap

10.4 Contact Information

We are available to answer any questions and provide additional information.

Primary Contact: [Your Name] [Title] Uruti Hub Limited Email: [your.email]@urutihub.com Phone: +250 XXX XXX XXX Mobile: +250 XXX XXX XXX

Technical Inquiries: Email: solutions@urutihub.com Phone: +250 XXX XXX XXX

Office Location: Uruti Hub Limited [Street Address] Kigali, Rwanda

Website: www.urutihub.com **Support Portal:** support.urutihub.com

10.5 Proposal Validity

This proposal is valid for **90 days** from the date of submission (January 15, 2026 - April 15, 2026). Pricing and terms are subject to change after this period due to market conditions and platform enhancements.

Conclusion

Banque Populaire stands at the forefront of digital banking innovation in Rwanda. A robust, secure, and scalable SMS communication platform is essential to support your growth, enhance customer trust, and maintain operational excellence.

Uruti Hub Limited brings proven expertise, local understanding, and unwavering commitment to help you achieve these goals. Our Enterprise SMS Gateway solution is purpose-built for financial institutions, combining bank-grade security, high-performance delivery, and comprehensive support.

We are confident that our platform will:

- **Strengthen security** through reliable OTP and fraud alert delivery
- **Enhance customer experience** with real-time transaction notifications
- **Drive engagement** through targeted, compliant marketing campaigns
- **Improve efficiency** through automation and consolidated reporting
- **Ensure compliance** with full audit trails and regulatory alignment

We look forward to the opportunity to discuss this proposal in detail, demonstrate our platform capabilities, and answer any questions you may have. Together, we can build a communication infrastructure that powers Banque Populaire's vision for the future of banking in Rwanda.

Thank you for considering Uruti Hub Limited as your trusted technology partner.
